**Abstract of the
Talk**

With an all-round hue and cry around climate change, it is imperative that all Businesses and individuals are made aware of the impending Global crisis. Hence, discussions on Environment, Social, and Governance (ESG) are on top of the table. But, since this exercise is not a one-time fix, the continuum necessitates the use of Technology, particularly AI. Using ML and AI, critical parameters regarding ESG and Sustainability can be monitored, tracked, and hence controlled. AI prompts will highlight hotspots on emissions which can then be addressed. This webinar provides us an opportunity to share thoughts and the latest developments on this subject and how digitalization, decentralization, and decarbonization can help mitigate this problem at hand. The webinar will discuss its all-round perspective including the real-time issues and challenges.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
