Abstract of the Talk

Everybody is familiar with the word Compression in different ways. Compression process has different meanings in chemical, mechanical, civil and metallurgical engineering. But the moment we think about compression in electronic engineering, one word which strikes our mind is “Digital”. Digital audio and video signals integrated with computers, telecommunication networks, and consumer products have fueled the digital revolution. At the heart of this revolution is the digital compression of audio and video signal. The compression for digital revolution is like the heart for human body. The way proper functioning of heart is essential for human body to survive, similarly proper compression is necessary to make digital revolution a complete success. Compression has now reached the stage where it can economically be applied to video and audio systems on a wide scale. The webinar aims to discuss various aspects of the compression.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
