**Abstract of the
Talk**

Though the terms 'computing' and 'computer science' are new, yet their idea and practice have long history in India, China, Egypt, Mesopotamia and Greece, extending to at least 2500 years. Greek Logic and formalisation tradition and Indian tradition of algorithmic problem-solving form two of the four pillars of the current computer and information (ICT) revolution. Algorithmic problem-solving has been one of the foundations of Mathematics; and Logic, a part of philosophy, forms the basis of Euclidean Geometry. The webinar aims to discuss various contributions of (i) ancient & medieval Indian linguistics, (ii) ancient & medieval Indian computational mathematics (iii) ancient & medieval Indian logic, and (iv) intellectual environment & institutions in ancient & medieval India.

All are welcome:

Please circulate this to all your interested colleagues, associates and friends. Please register in large numbers and derive maximum benefit. **Advance registration is mandatory for participation. Participants will also get Participation Certificate.**
