**Abstract of the Talk**

Today, we live in a pure digital age and are hyper connected with the digital devices, all around us, which is leading to exponential increase in cyber threats. This overemphasizes the need of Cyber Forensic Audit, which has grown from art to science to engineering. This transition calls for new role for CIO's, CFOs, and Cyber Auditors. The change in the scenarios from standalone to online systems has created the essentiality of cyber forensics, erstwhile investigators area to larger involvement of CEOs, CIO's and Auditors in designing, implementing, managing the online, real-time systems in the enterprises. The design of audit boxes will ensure consistency; integrity and regulatory things, which are to be in process all the time and every time. Alerts will be initiated if any breach happens during the operations and management. This calls for a synergized role of the CIO's and IT Auditors to the CEOs who wish synergizing of business goals with IT/IS. The webinar will discuss its all round perspective including the real-time issues and challenges.
