**Abstract of the
Talk**

Robotics is the grindstone of automation, capable of revolutionizing the production and service sectors. Robots are common in production lines and assembly lines as they are tireless, stronger, more precise and faster than humans. However, as technology advances in the areas of energy and artificial intelligence, robots are becoming common in even more areas that were traditionally dominated by skilled human workers such as drivers, waiters and many more. Robots and intelligent agents, started to make their appearance in jobs that demand higher intellectual capabilities like medical doctors, lawyers and so on. The development cost of robots have been dramatically reduced over the past two decades, making robots more affordable for smaller organizations. Adopting robots to an organization is not an easy task and will require changes to organizational structure, business processes and culture. This webinar aims to explore the impact of robotics and automation to modern business.
